

**NAME**

**dvitomp** – convert a TeX DVI file to a MetaPost mpx file

**SYNOPSIS**

**dvitomp** [*options*] *dvifile*[.dvi] [*mpxfile*[.mpx]]

**mpost --dvitomp** *dvifile*[.dvi] [*mpxfile*[.mpx]]

**DESCRIPTION**

**dvitomp** translates the given *dvifile* to a MetaPost *mpxfile*. The default *mpxfile* is the basename of *dvifile* extended with **.mpx**.

**OPTIONS**

See **tex**(1) for details of command-line parsing.

**-kpathsea-debug** *bitmask*

set path searching debugging flags according to *bitmask*.

**-progrname** *string*

set program name to *string*.

The standard **-help** and **-version** options are also supported.

**SEE ALSO**

**dvitomp** is an alias for MetaPost. See **mpost**(1).
